## EDUCATION

### NORTH CAROLINA STATE UNIVERSITY

Master of Business Administration (MBA)

Master of Computer Science

Raleigh, NC

Expected May 2028

May 2026

### UNIVERSITY OF NORTH CAROLINA AT CHARLOTTE

Bachelor of Science in Computer Science, Minor in Computer Engineering

Charlotte, NC

May 2025

## EXPERIENCE

### NORTH CAROLINA STATE UNIVERSITY

Graduate Teaching Assistant

Raleigh, NC

Aug 2026 – Present

- Evaluate student submissions, provide written feedback, and coordinate with faculty to support course delivery

### DELTA RING 2

Software Engineer (Contract)

Remote

Apr 2026 – Present

- Refactored server-client vehicle and infantry physics for a cross-platform FPS with 5.3M+ visits and 86K+ favorites
- Reverse-engineered active exploit scripts to architect targeted security patches, automated cheat detection, and ban systems
- Streamlined client UI data pipelines and datastore sync via ConfigService, enabling zero-downtime live feature updates

### LOCKED IN NETWORK (SNIPER DUELS)

Anti-Cheat Developer

Remote

Oct 2025 – Present

- Lead anti-cheat development for SNIPER DUELS, a cross-platform FPS (PC, mobile, console) with 397M+ visits and 1.9M+ favorites
- Built Luau cheat detection and automated enforcement systems that have issued 440K+ successful bans to date
- Developed and shipped additional gameplay features for a live game serving thousands of concurrent players

### BOSS STUDIO LLC (REDLINER)

Software Engineer (Freelance)

Remote

May 2026 – Sep 2026

- Analyzed exploit tooling and script obfuscation risks for REDLINER, a movement-based FPS with 64.9M+ visits and 339K+ favorites
- Developed Luau anti-cheat protections detecting unauthorized execution environments and exploit activity

### REACT STUDIOS

Senior Software Engineer

Remote

May 2025 – Aug 2026

- Architected cross-platform APIs with Bun, Luau, and Firebase, sustaining real-time data sync at sub-50ms response times
- Spearheaded AWS infrastructure optimizations that scaled backend performance to production workloads at 99.9% stability
- Streamlined cross-functional deployment pipelines and UX architecture, reducing release friction and lifting user engagement
- Designed custom telemetry workflows to monitor user retention, sub-second latency targets, and live session health

Software Engineer

Oct 2020 – May 2025

- Engineered custom Lua networking libraries and client-server sync frameworks for low-latency, high-traffic environments
- Partnered with product and design leads to define feature requirements, translating engineering constraints into roadmaps
- Refactored data persistence and state pipelines, shrinking server payloads and eliminating peak-concurrency bottlenecks

Software Engineer Intern

Jun 2022 – Aug 2022

- Prototyped features in TypeScript, PHP, and Luau; supported backend deployment, server health checks, and protocol debugging

## RESEARCH & PROJECTS

### Offloading ECG Inference from ESP32 to Host | Independent Study, NC State

Jan 2026 – May 2026

- Redesigned an ESP32 cardiac monitor to stream ECG over BLE to a Python TFLite host, with a ring buffer for zero data loss
- Evaluated EDF, DA-EDF, and utility-aware scheduling under 30–75% packet loss, preserving 98.69% of R-peaks at 30% loss

### Adaptive Power Management in O-RAN Systems | NC State ECE/CSC 572

Aug 2025 – Dec 2025

- Built a KPM-driven power-control xApp on the Near-RT RIC (FlexRIC, OpenAirInterface), cutting idle energy use by 18.3%

### Full-Stack Platforms | TypeScript, Bun, Elysia, React, PostgreSQL, Docker, Go

May 2025 – Present

- CatWatcher: developer platform (API, dashboard, Discord bot, Chrome extension) on Bun, Elysia, PostgreSQL, Docker, CI/CD
- MIRoles (Mountain Interactive): React/Firebase app with OAuth 2.0 SSO, role-based access control (RBAC), and audit logging
- Also built a Go messaging relay with rate limiting and a PHP Invision Community REST API plugin with OAuth 2.0 linking

## SKILLS

**Languages:** Lua/Luau, C, C++, C#, Python, TypeScript, JavaScript, Go, PHP, Java, Ruby, SQL, HTML/CSS

**Frameworks & Tools:** React.js, Svelte, Node.js, Bun, Elysia, Firebase, PostgreSQL, SQLite, REST APIs, OAuth 2.0, TensorFlow Lite

**Cloud & DevOps:** AWS, Docker, CI/CD, Git

**Systems:** Embedded C (ESP32, TI MSP430), BLE, UART/ADC/GPIO, O-RAN, Client-Server Networking, Anti-Cheat & Security

**Business:** Product Strategy, Cross-Functional Leadership, Technical Roadmapping, Telemetry & User Analytics
